

First Aid Courses

If there was an accident in your office, workplace or home would anyone know what to do before the ambulance arrived? Is anyone trained to look after someone who is not breathing, unconscious or bleeding?

Today we all demand higher levels of safety at work, at home, when we travel and at play. An important part of safety is having someone to hand who is trained in First Aid, in the workplace, the house, the school or the shopping mall.

Functional Engineering has been part of offering higher standards of best practice to the SE Asian market for 25 years and today is offering a wider range of services.

Our First Aid courses are taught in English by a highly qualified and widely experienced nursing professional. We offer 16 hour intensive and 8 hour intensive courses in basic life support including resuscitation, controlling external bleeding, handling choking and managing burns. These courses are offered in small group sessions using demonstrations, interactive discussion and practical examination. Sessions can be timed to your convenience and can take place at your own location (for groups of 15-20) or at our facility. Cost is kept to the minimum as you only pay per participant.

Fire Safety Training

Fire kills. We all know it, but what action have we taken to prevent fire in the workplace and at home? Do you know what to do if a fire starts right now where you are? Do you and your colleagues have a fire escape plan? Do your domestic staff know what to do if fire starts in your home?

Fire safety applies to homes, leisure and shopping facilities and all workplaces. In each of these places we should take a serious look at fire prevention as well as have provision and a plan for escape in a fire. Training is the best way to make sure that you, your family and your employees are all aware of what to do in a fire.

In 2006 Functional Engineering is celebrating 25 years in the field of Fire Safety & Protection in the region. One of the new services we are offering is Fire Safety Training. This training is specifically tailored for the individual or organisation. It may be for a home or workplace, large or small. Training will take place at the client's location and can include a Fire Safety Check, development of an emergency plan, and practical training in the use of fire extinguishers. On our staff we have NEBOSH certified and qualified trainers, as well as qualified, experienced fire engineering professionals.
